

subhalo_factor PDF-level acceptance: model 3 vs brute truth (fixed- $\langle N \rangle = 100$ rule, $m_{\text{floor}}=10^7$)

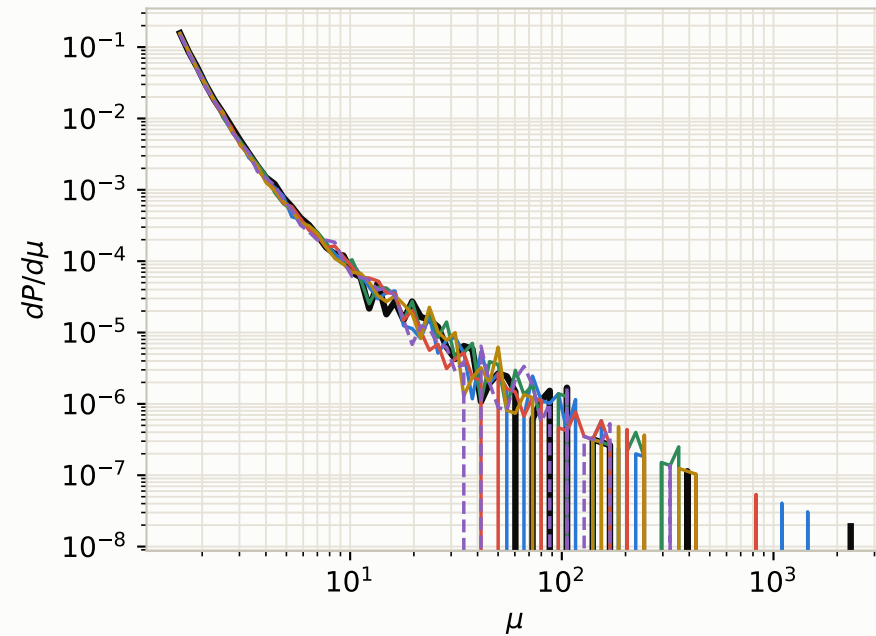

A. Distribution gap to brute truth
(dash = finite-sample floor)

B. $z_s = 5$: $P(\ln \mu)$

C. $z_s = 5$: magnification tail

D. $z_s = 5$: tail vs truth
(bars = conservative 95% CI)
