

(a) exact $\sigma(z_s)$ and both asymptotes

(b) local power-law slope

(c) the variance source density $P(z)$

$$\sigma^2(z_s) = \int_0^{z_s} P(z) [\chi(1 - \chi/\chi_s)]^2 dz$$

(d) high- z_s closed form: σ^2 is a parabola in $1/\chi_s$
